

It is vitally important to the spirit of competition that XM radio be allowed to broadcast local weather and traffic.  
If XM radio is not allowed to broadcast local weather and traffic it won't make me go back to local stations. I will just get my weather and traffic from my mobile phone.

I stopped listening to local stations because of the monopoly practices of many of the major radio broadcasting companies in addition to the complete lack of originality and the constant commercial after commercial with the same commercials being played over and over again.

Please do not take away XM Radio's right to broadcast local information!!!!
